[1]

Mean Absolute Error

Mean absolute error here is 1.5835

[Mean Absolute Error (MAE): MAE measures the average magnitude of the errors in a set of predictions, without considering their direction. It's the average over the test sample of the absolute differences between prediction and actual observation where all individual differences have equal weight.]

$$\text{MAE} = \frac{1}{n} \sum_{j=1}^n |y_j - \hat{y}_j|$$

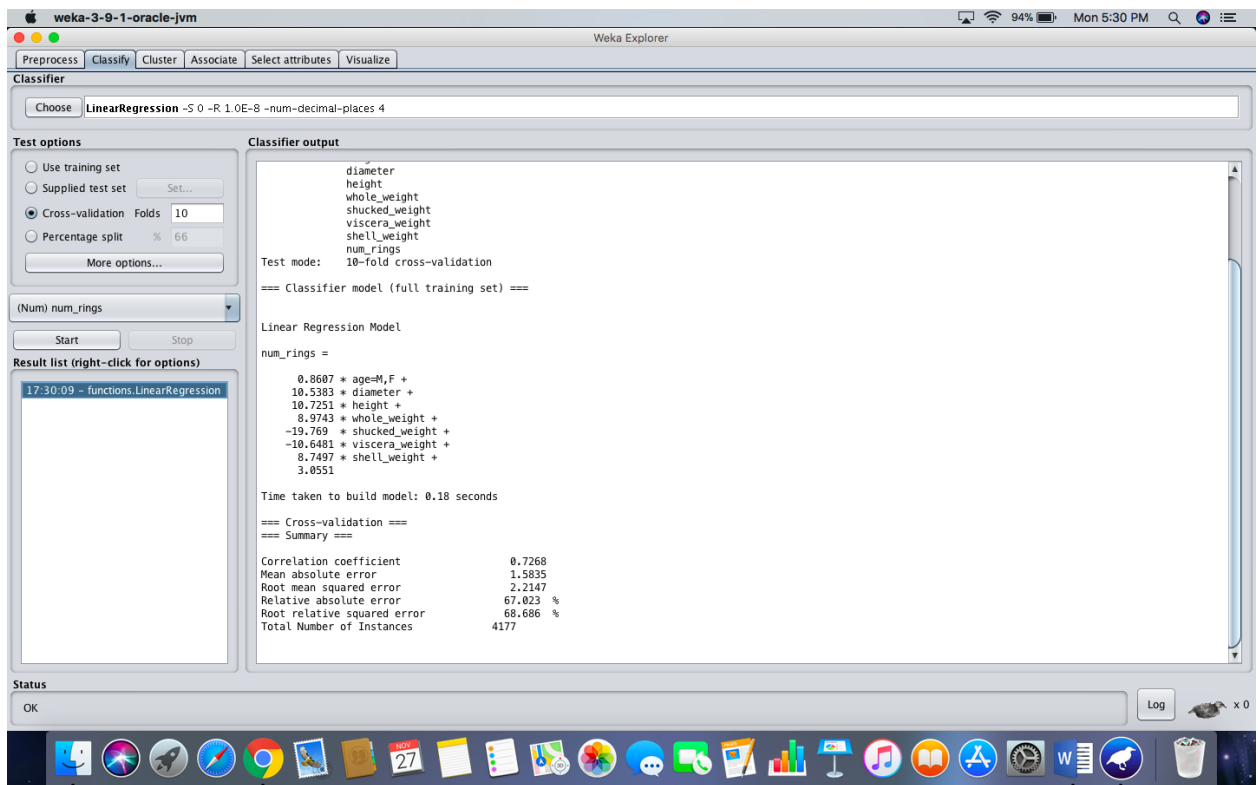

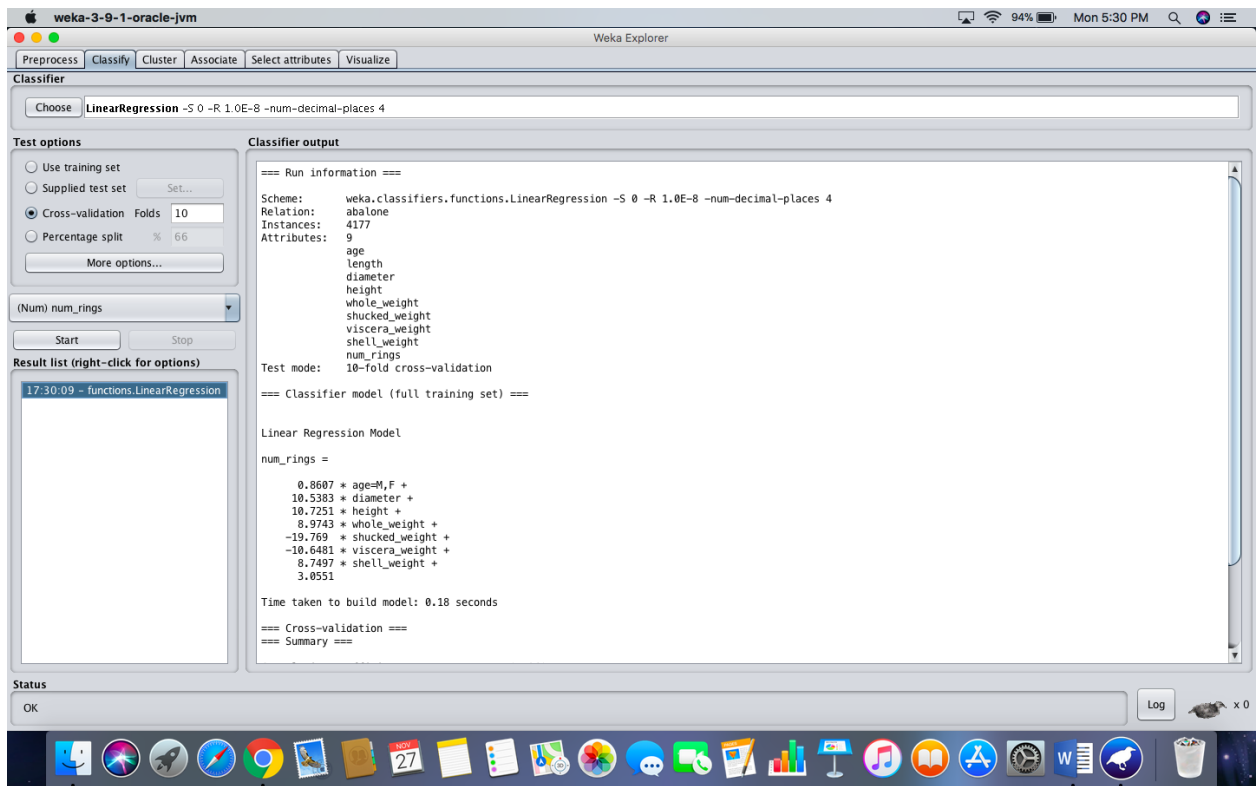

[2]

Num_rings

num_rings =

0.8607 * age=M,F +
10.5383 * diameter +
10.7251 * height +
8.9743 * whole_weight +
-19.769 * shucked_weight +
-10.6481 * viscera_weight +
8.7497 * shell_weight +
3.0551

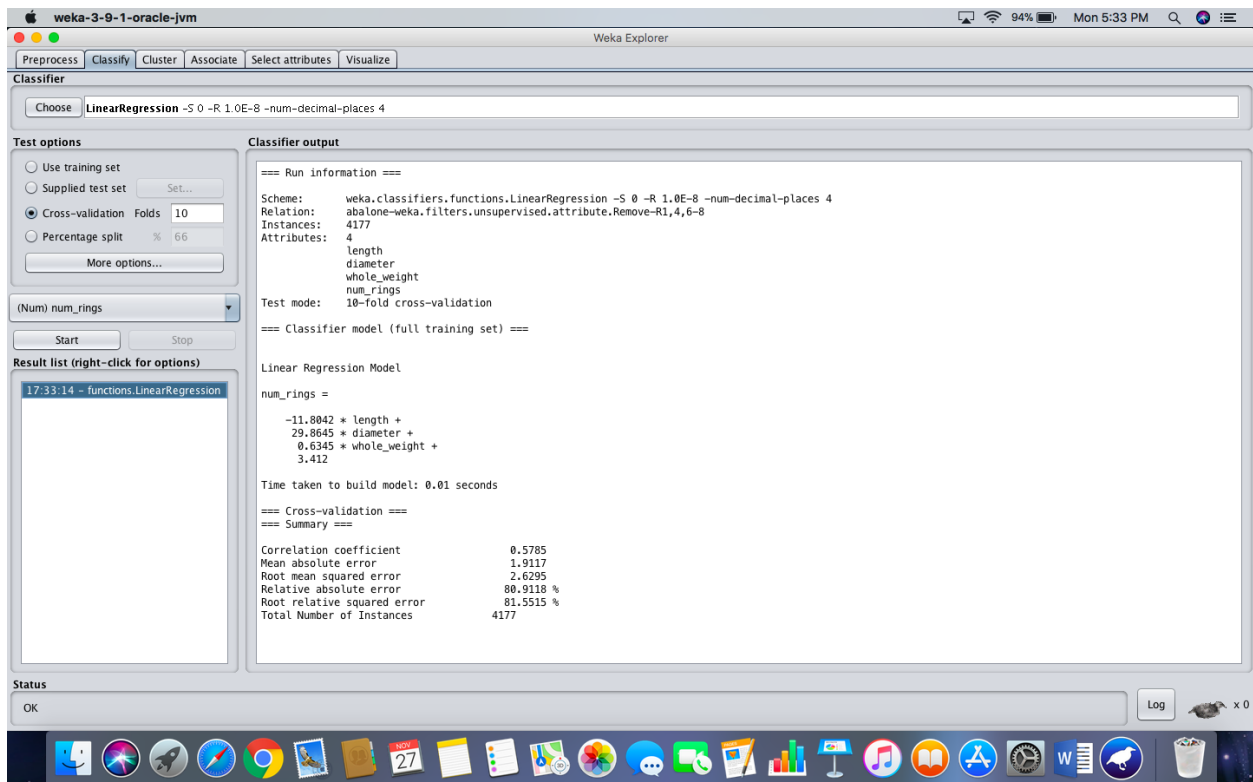

The co-efficient of the Length parameter is 0.

[3]

num_rings =

$$\begin{aligned} & -11.8042 * \text{length} + \\ & 29.8645 * \text{diameter} + \\ & 0.6345 * \text{whole_weight} + \\ & 3.412 \end{aligned}$$

Mean absolute error here is 1.9117

[4]

Linear Equation :

Num_rings=

$$\begin{aligned} & -0.8249 * \text{age}=\text{I} + \\ & 0.0577 * \text{age}=\text{M} + \\ & -0.4583 * \text{length} + \\ & 11.0751 * \text{diameter} + \\ & 10.7615 * \text{height} + \\ & 8.9754 * \text{whole_weight} + \\ & -19.7869 * \text{shucked_weight} + \\ & -10.5818 * \text{viscera_weight} + \\ & 8.7418 * \text{shell_weight} + \\ & 3.8946 \end{aligned}$$

DECISION TREE

BONUS QUESTION

[1]

The screenshot displays the RapidMiner software interface with a workflow design in the 'Design' view. The workflow consists of three operators: 'Read ARFF', 'Select Attributes', and 'Clustering', connected sequentially. The 'Read ARFF' operator has an input 'fil' and an output 'out'. The 'Select Attributes' operator has an input 'exa' and an output 'exa'. The 'Clustering' operator has an input 'exa' and an output 'clu'. The 'Clustering' operator is also connected to a 'res' output. The 'Repository' panel on the left shows a list of data sources: 'Samples', 'DB', 'Local Repository (khushishah)', and 'Cloud Repository (disconnected)'. The 'Operators' panel on the left shows a search for 'k-me' and a list of operators: 'Modeling (3)', 'Segmentation (3)', 'k-Means', 'k-Means (Kernel)', and 'k-Means (fast)'. The 'Parameters' panel on the right shows the 'Process' operator with parameters: 'logverbosity' (init), 'logfile' (empty), 'resultfile' (empty), 'random seed' (2001), 'send mail' (never), and 'encoding' (SYSTEM). The 'Help' panel on the right shows the 'Process' operator's synopsis and description. The bottom status bar indicates 'No results were found.' and 'Activate Wisdom of Crowds'.

Linear Regression

The screenshot shows a software interface for a Linear Regression model. The main area displays the equation: $- 11.933 * \text{length} + 25.766 * \text{diameter} + 20.358 * \text{height} + 2.836$. The interface includes a top toolbar with icons for file operations and execution, a 'Views' section with 'Design' and 'Results' tabs, and a 'Repository' panel on the right showing data sources like Samples, D8, Local Repository, and Cloud Repository.
